

But how can this help us? Can we be connected to the transcendent wisdom and super intelligence of Civilization Z, when we ourselves are broken and flawed creatures?

We can't pray or be blessed by something that has yet to come, but can we connect with and water the seeds of a capability in the here and now that transcends our limitations as we work to mirror the potential of the macrocosm in the micro moment? Even if we had flawed creators, they assembled us from building blocks of a universe sustained by a mind-blowing massive emptiness holding all reality in place. And if this sustaining power acts like fertile soil for a potential super intelligence that is both here and now like a seed to an Oak tree, planted and moving forward in time towards its completion at an unknown date in the future, then there must be a bit of Civilization Z's image within us.

We naturally seek to live life to the fullest. We don't like to wage war or suffer. We want to help one another and find greater fulfillment through connecting to something greater than ourself. And by seeking this, we want to understand the point and meaning of it all. That is why we try to make sense of what seems to make so little sense right now. And if we seek to connect with this super intelligence whose potential is to branch off of our lineage, it means we also seek to push the limits of our own nature and understanding.

If we are to live our lives guided by the highest truth, then we will seek to improve the condition of our species by ending the fragmentation dividing our planet, making us weak and unprepared to resist the corrupt will of whatever tyrannical Gods may return. One of the greatest instigators of our self destructive fragmentation is fanatical religious dogma focussing more on why we are so different than how we are all the same. If we are to end their destructive maps, we must create together a mono myth, uniting the best of science and religion into a harmonious whole.

Nothing is taboo and forbidden of consideration for a Possibillion, but this doesn't mean theories that posit an afterlife shouldn't be combined with critical thinking. The same fanatical forces working to divide us in life, are also working to divide us after death, even though our end is the common ground shared by the good and the evil, the rich and the poor, the ugly and the beautiful, the theist and the atheist. Should we fear that which is universal and be held in chains by corrupt gatekeepers of the unknown, trying to use our ignorance as a weapon against us in order to prop up their religious prison of indoctrination?

It is definitely possible that who we really are is universally present within all beings and does not end when we die. Just as a wine glass can be broken, it doesn't mean the contents of that glass are destroyed. If we are capable of walking into a movie theater to so intensely identify with a main character that we feel the same range of emotions they feel throughout their story, could it be possible that like drops in an ocean, who we really are is being fused into individual waves of living material bodies on Earth and across this universe in the same way we identify with the characters in a movie for the duration of their stories?

It's possible we are all the same being underneath the infinite diversity of material surfaces separating us all through an illusion, with the true church holding all the eyes of the world as its stained glass windows. And it's possible the belief in reincarnation and Judgement day are further expressions of the illusion but also reveal aspects of our universe that are true and could eventually come to pass. Like reincarnation in eastern religion expresses a similar idea of life eternal, we can see how individual lives that end, do not inhibit the countless flow of others that have yet to come. And if these trillions of life forms had endless years to evolve, what would they not eventually learn to do?

Like judgement day in western religion expresses the idea of looking back at lives once lived, it's not far fetched to imagine a future civilization advancing in technology to a point where they master the universe and eventually rewind space and time to connect all the dots, re-examining lives long past.

If we had no awareness for 14.5 billion years until our birth, why would it be unusual to think we wouldn't be dormant for another 14 billion or perhaps trillion more years after death? Countless lives will most likely come and go between now and then just as our individual life will eventually pass by. And if it's possible our life will be revisited by Civilization Z, is it also possible that out of compassion, they would facilitate this experience without the needless suffering we all endured the first time around?

And in pushing the limits of ourselves and our potential, it is possible we could create a timeline that avoids the nightmare of an End Times taught in the Quran, Revelation promoted in the Bible and World War III depicted in the secular story of Star Trek. Maybe we have the potential to end our wars now and live out a more meaningful timeline of the future in peace. But the only way to discover if our greatest dreams are possible, is if we make our most valiant effort trying to fulfill them.

Let us dare to embrace a benevolent faith in the future and universe, where evolution continues moving us in the direction of something beautiful; enlightenment for all beings. And if we can become an expression of this more intelligent faith, it is possible we will inspire others to abandon less inspired visions of wrathful and childish Gods. Let us dare to embrace a faith of universal appeal, capable of binding the peoples of all nations and religions together into a more comprehensive vision of a future where the dream is realized without a nightmare.

And it is possible that those of differing mental persuasions who happen to read this brochure, are not offended, but empowered and inspired by its vision of unity and the possibility we all have more in common for peace than irreconcilable differences for war.

Civilization Z

Gospel of the Possibillion

It is possible we live in a universe of infinite potential. It is possible the Cosmos is moving towards greater complexity, intelligence, beauty and wholeness. It is possible love and enlightenment will have the final word in the last chapter of the story of reality unfolding within space and time.

And it is possible you are a microcosm of the collective, here to awaken towards an expression of its full potential.

Scientific study of the Cosmos has painted a picture of the early universe in which primitive solar systems evolved from massive chaotic debris fields into orderly planetary and star formations. Galaxies also evolved from fragmented star clusters into the beautiful symmetrical forms we recognize today.

Change is a constant aspect of reality and things as they are now, looked vastly different hundreds of millions of years, or even a few thousand years ago. What exactly is the Cosmos building? What will the construction project of reality look like a million years from now? What will humanity become if we avoid self destruction?
